TECHNICAL INFORMATION

Cleaner

Application

Application tool/application rate

LOBATOOL mop. On large areas, use a suitable flat wiper mop or a scourer-vacuum machine. / Depending on the application, add approx. 50 - 100ml to a bucket with 10 l of water, sufficient for 100 m².

Application:

Mix the cleaning concentrate with water, using a higher ratio for heavier soiling. Damp-wipe the surface with cleaning solution using a suitable cleaning device.

Using too much water and allowing the product to work for too long can cause swelling of parquet and cork flooring and must therefore be avoided.

The product is also suitable for use in scourer-vacuum machines.

General guidelines

Cleaning of tools: Clean tools and equipment immediately with water.

Avoid contact with the eyes.

Avoid contact with the eyes and skin.

· **Breathing equipment:**

In case of brief exposure or low pollution use breathing filter apparatus. In case of intensive or longer exposure use breathing apparatus that is independent of circulating air.

· **Hand protection**

Protective gloves.

To avoid skin problems reduce the wearing of gloves to the required minimum.

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.

Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

· **Material of gloves**

Nitrile rubber, NBR

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

Recommended thickness of the material: ≥ 0.4 mm

· **Penetration time of glove material**

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

For the mixture of chemicals mentioned below the penetration time has to be at least 480 minutes (Permeation according to EN 374 Part 3: Level 6).

Value for the permeation: Level ≤ 6

· **Eye/face protection** Tightly sealed safety glasses.
